Shore hardness testers, analogue, HB

Shore hardness testers for hardness determination of plastics through penetration measurement

- -Typical application: Measurement of penetration depth (Shore).
- -Material thickness of the sample, min. 4 mm
- -Particularly recommended for internal comparison measurement. Standard calibrations e. g. to DIN 53505 are not possible because of very narrow standard tolerances
- -Can be attached to the test stands TI-AC (for Shore A and Shore A0) and TI-D (for Shore D)

Shore A for rubber, elastomers, neoprene, silicone, vinyl, soft plastics, felt, leather and similar materials **Shore A0** for foams, sponges

Shore D for plastics, formica, epoxides, plexiglass etc. Compact handheld durometer for plastics with drag indicator.

-Max mode: Holds the maximum value in the display

- -Point mode: Shows one instant value
- -Screws to screw on to the TI: M7 fine thread
- -Delivered in a plastic carrying case
